## Collaborative Working At Labman

## Arthur Clarkson

**25th November 2024**

In my role at Labman, I have actively collaborated with colleagues across various roles to enhance our internal business tools on the intranet. Recently, I worked closely with our UI designer, who utilizes Figma for design work, to redesign the MTL compliance tracker. This collaboration involved integrating his design concepts with the technical aspects of development, ensuring that the final product was both aesthetically pleasing and functionally efficient.

Additionally, I partnered with a tester from our quality assurance team to improve new features. For example, when I developed the functionality for users to upload multiple VAT receipts to a purchase order, the tester conducted thorough QA testing. His feedback was crucial in refining the feature and ensuring it met all user requirements before deployment.

Our software team is rich with diverse viewpoints and backgrounds. I actively listen to my colleagues' perspectives, which has been instrumental in identifying the best solutions for complex problems. By embracing these different ideas, we foster a collaborative environment that values inclusion and diversity.

My positive attitude toward inclusion and diversity is evident in my commitment to creating a supportive atmosphere where every team member feels heard and respected. I believe that by valuing each person's unique contributions, we enhance our ability to innovate and deliver effective solutions for the business.

In conclusion, the collaborative efforts I have made with colleagues at Labman—from working closely with a UI designer on aesthetic and technical integration, to refining features with a QA tester's feedback—have all underscored the value of diverse perspectives in our team. By fostering an atmosphere in which each individual's contributions are recognized and respected, we not only achieve high-quality results but also strengthen our commitment to inclusion, innovation, and ongoing success in our projects.
